

HYGIENE, SAFETY AND COMFORT: A STRONG ALLIANCE FOR HEALTHCARE FACILITIES!

Body and spout with smooth interiors

Thermal shock feature

Ref. 2565T5

DELABIE has unveiled the new design for its basin and sink mixers with high fixed and/or swivelling spouts. Available in several versions, they are designed to meet the hygiene, safety and comfort challenges faced by healthcare facilities.

Managing hygiene

DELABIE's new range of mixers with high spouts has been designed to reduce the volume of standing water in the body to a minimum and, therefore, limit biofilm attachment.

In addition, all the internal parts of these mixers, including the spout, are completely smooth. This significantly reduces the risk of bacterial development.

Enhanced anti-scalding safety

The new range of mixers with high spouts is available in several versions. DELABIE now offers mechanical mixers with a ceramic or pressure balancing cartridge, both fitted with a pre-set maximum temperature limiter. The user cannot override the temperature limiter, reducing the risk of scalding.

The pressure-balancing models also feature SECURITHERM EP technology: if the cold water supply fails, the hot water flow rate is reduced to a trickle, preventing any risk of the user scalding themselves. If the hot water supply fails, the cold water flow rate is also reduced.

In addition, with the new design of these mixers with high spouts it is easy to undertake thermal shocks at the temperature of the hot water in the system. Simply press the little red button at the back of the control lever.

Optimum temperature stability

DELABIE's mixers with high spouts are designed to limit temperature variations in the event of pressure fluctuations in the system.

The pressure-balanced models compensate for the inevitable variations in pressure between the cold water and hot water inlets, thus delivering water at a perfectly constant temperature.

Comfort for all

The new mixers in the range are available with a drop height of 165mm, 205mm or 305mm and a spout length of 140mm, 170mm or 250mm, providing optimised hand washing and reducing the risk of bacteria splashing back onto the spout. They are also suitable for fitting point-of-use filters for curative or preventative purposes. Equipped with an ergonomic long lever, these mixers meet the needs of nursing staff as well as the elderly and/or people with reduced mobility. They can be controlled without any manual contact, using the elbow, wrist, or forearm.

PRODUCT BRIEF / MECHANICAL MIXER WITH HIGH SPOUT

DELABIE has unveiled its new range of mechanical mixers with high spouts. Available in versions with a ceramic or pressure-balancing cartridge and with a fixed and/or swivelling spout, they are also available with different spout heights and lengths to provide optimal comfort. By design, these mixers contribute to both patient safety and the prevention of nosocomial infections in healthcare facilities. 10-year warranty.
